Water Sample Fee (per trip)	\$35.00
<p>Monroe County Department of Public Health staff will collect the requested water samples and transport them to the lab for analysis. Please note that as sample collection method and transportation to the lab are important factors in sample integrity, we cannot accept privately collected samples for testing. Samples must be collected by and transported to the lab by Monroe County Department of Public Health Staff. This fee applies to all water sampling requests.</p>	
Private Well Base Package (Suite 1)	\$105.00
<p>This package reflects parameters found in NYS Appendix 75-C, Table 1. Includes Total Coliform Bacteria (positive/negative), Lead ⁽¹⁾, Nitrate (NO₃), Nitrite (NO₂), Arsenic and Turbidity. If the sample tests positive for Total Coliform Bacteria, the lab will further determine if the sample tests positive for E. Coli.</p>	
Private Well Expanded Package (Suite 2)	\$60.00
<p>This additional package reflects NYS Appendix 75-C, Table 2. These parameters are helpful when considering treatment. Includes Iron, Manganese, Hardness, Alkalinity, pH and Sodium.</p>	
Potable Water Sample Per Analyte (Group 1)	\$15.00 Each
Alkalinity	Chromium
Antimony	Copper
Arsenic	Corrosivity ⁽²⁾
Barium	Hardness
Beryllium	Iron
Cadmium	Lead (first draw sample)
Calcium	Lead (flush sample)
	Magnesium
	Manganese
	Nickel
	pH
	Potassium
	Selenium
	Silver
	Sodium
	Sulfides
	Total Dissolved Solids
	Thallium
	Turbidity
	Zinc
	Field Temp. (no fee)
Potable Water Sample Per Analyte (Group 2)	\$25.00 Each
Chloride	Methyl Tert-Butyl Ether (MTBE)
Cyanide	Nitrate/Nitrite Combined (NO _x)
Fluoride	Nitrate (NO ₃) ⁽³⁾
Mercury	Nitrite(NO ₂)
	Phosphorus
	Standard (Heterotrophic) Plate Count
	Sulfate
Other Water Bacteria Sample	\$35.00 Each
<p>Total Coliform Bacteria (positive/negative). If the sample tests positive for Total Coliform Bacteria, the lab will further determine if the sample tests positive for E. Coli.</p>	

- (1) Suite option includes one Lead sample only. Lead sample is collected as first draw unless a flush sample is specifically requested as a substitution. If both a first draw sample and a flush sample are requested, the sample included in the Suite will be collected as a first draw sample; Lead (flush sample) must be selected from the Potable Water Sample Per Analyte (Group 1) as an additional item. Staff will discuss details of sampling at time of scheduling.
- (2) Corrosivity is a product of Alkalinity, Hardness, pH, Total Dissolved Solids and temperature. If Corrosivity is selected, these other parameters will automatically be added.
- (3) Determining Nitrate (NO₃) requires testing Nitrate/Nitrite Combined (NO_x) and Nitrite (NO₂). Selecting Nitrate (NO₃) will automatically add these two parameters. When selecting Nitrate (NO₃), the fee charged is based on these two tests (\$50.00 total).

Sampling Request Summary

Water Sample Fee (per trip)	@ \$35.00 each	=	\$
Private Well Base Package (Suite 1)	@ \$105.00 each	=	\$
