

IV. PERMIT INSPECTION

The County reserves the right to perform inspection of all work performed in the County right-of-way as a condition of all permits issued. A representative of the Monroe County Department of Transportation Permit Office will visit the site and inspect the work on a regular basis. This representative's responsibilities include the following:

- Provide interpretation and make decisions based on design and construction aspects of the approved plans.
- Ensure that the work is being performed in accordance with Monroe County Department of Transportation standards and details.
- Ensure that the conditions of the permit(s) are adhered to.

The permittee should thoroughly read the conditions and restrictions on the back of the 136 Highway Work Permit and any special conditions and details that are attached to the permit. Highlights of the standard special conditions include:

- The permittee is required to give the Permit Office two (2) working days advance notice before work within the County right-of-way is to begin.
- If a preconstruction meeting for the project is to be held, we request one week advance notification so that a representative from the Permit Office can be present.
- For construction operations where traffic on a County highway will be significantly affected, we require that a site meeting be held prior to performing this operation with the permittee, the Contractor, and the Permit Office representative to determine the appropriate maintenance and protection of traffic measures required to perform the work safely.

MCDOT MAY REQUIRE ADDITIONAL PAYMENT FOR INSPECTION OF WORK PERFORMED OUTSIDE NORMAL BUSINESS HOURS MONDAY-FRIDAY

NO WORK SHALL BEGIN IN THE COUNTY RIGHT-OF-WAY UNTIL THE 136 HIGHWAY WORK PERMITS HAVE BEEN ISSUED.
